

MGS Car shipping has a department which specifically deals with shipping large trucks, plant and construction equipment. With professional and experience staff we can assist you in every aspect of the shipment. The rates for large trucks etc. are calculated on the size and weight of the vehicle, you only pay for the space your vehicle takes up. So we will need the dimensions/weight before we can give you a quote. These must be accurate as all vehicles are weighed and measured when they arrive at the port.

Extra-large trucks/plant etc. are too big to be loaded in to a container, therefore they will have to be shipped by special containers or on roll on roll off. We can collect your vehicle on a low loader and take it to the UK export terminal, it will then be stowed and secured on the next available vessel and shipped to the port of your destination country.
